INDUSTRIAL

Under cover – North Coast Building Products is a trusted supplier of high-quality building materials for the construction industry since 1954. They offer a wide range of products, including quality wood products that last longer and perform better when protected from the elements. That's why they partnered with

BuildWorks to install a model XP MegaDome, a 40' wide pre-engineered structure that provides ample space for storage racks along the walls. The installation was completed in just 10 days, with minimal disruption to the busy lumberyard operations.
